THE FINNISH OPEN SCIENCE AND RESEARCH INITIATIVE AND DEVELOPMENT OF GREEN OPEN ACCESS IN FINLAND

Pekka Olsbo
Head of Publishing, University of Jyväskylä
Introduction

- **Speaker:**
  - Working with open access since 1997 and last years as a developer of open science in the University of Jyväskylä.
  - Several national projects and working groups, now the leader of "Finland – a model country for green open access" project.

- **University of Jyväskylä**
  - 15 000 students, 2500 staff, multidisciplinary university with 7 faculties.
  - A forerunner in open science development in Finland.
EU demands Open Access

On the 27th of May 2016 EU leaders announced an initiative which asserts that European scientific papers should be made freely available to all by 2020. 

This is a result of a development that we all have known already for years. In Finland we have tried to get ready for this.
Open Science and Research in Finland

Open Science and Research Initiative 2014-2017

- Ministry of Education and Culture initiative for the promotion of information availability and open science
- Goal to make Finland a leading country in openness of science and research
- Scope includes publications, research data, and methods
- Provides researchers with practical knowledge in how they as individuals can implement open science
- Several services offered by the Ministry to researchers

Open science and research 2009-2017

ATT roadmap and progress/assessment model 2014

ATT's target level in 2017

- publications: ...
- research data: ...
- methods: ...

areas:
- publications
- research data services
- Enterprise architecture work
- Methods

TTA cooperation and services 2011-2014

TUTA survey project 2009-2011

- Manual
- Final report
- Progress plan

Coordination, enterprise architecture work
Open Science and Research vision

Vision 2017:
Open research leads to surprising discoveries and creative insights

- Reinforcing the intrinsic nature of science and research
- Strengthening openness-related expertise
- Ensuring a stable foundation for the research process
- Increasing the social impact of research
Vision opened

- Reinforcing the intrinsic nature of science and research. Openness and repeatability increase the reliability and quality of science and research.
- Strengthening openness-related expertise. Those working within the Finnish research system know how to harness the opportunities afforded by openness to boost Finland’s competitive edge.
- Ensuring a stable foundation for the research process. Good and clear basic structures and services enable new opportunities of openness to be harnessed in a timely manner and ensure a stable basis for research.
- Increasing the social impact of research. Open science and research creates new opportunities for researchers, decision-makers, business, public bodies and citizens.
Open Science and Research Roadmap 2014-2017

- The vision "Open research leads to surprising discoveries and creative insights" explained in more details.
- As a result of this roadmap “Information flow is facilitated by clear policies and best practices, and by providing services to safeguard the availability of scientific and research results... and openness has given Finnish research an international competitive edge.”
The Open Science and Research Initiative is based on a broad-based cooperation between ministries, universities, research institutions and research funders such as the Academy of Finland and TEKES - the Finnish Funding Agency for Innovation, Finnish Social Data Archive (FSD), National Library of Finland, Federation of Finnish Learned Societies, FinnoOA-the Finnish Open Access Working Group, CSC - IT Center for Science Ltd.
Initiative collaboration structure

Strategy group with members from universities, polytechnics, research institutes, ministries, funding bodies, etc.

- Expert group
- Workshops and targeted surveys
- Special working groups
- Service providers
- Management of the enterprise architecture
Open Science and Research services

- Etsin research data finder
- IDA research data storage
- AVAA open data publishing platform
- Aila data service portal
- Language Bank of Finland
- Doria & Theseus publication archives
- FINITO ontology service

FINLAND – a model country for Green Open Access

- Project funded by the Ministry of Education and Culture and The Open Science and Research Initiative.
- A joint project with the University of Jyväskylä and University of Eastern Finland.
- Aim is to lift the green OA activity in Finland to international top level.
- Create a general model for self-archiving and centralized open science services
Project task-list

- Create services and information systems that support open publishing services of universities.
- Create a service model for practicing self-archiving as easy as possible.
- Process model will combine reporting of research information and self-archiving to one cost-effective and unified process.
- Ensure the interoperability of current research information systems (CRIS) and institutional repositories.
- Implement open licenses to repositories.
- Research upon open publishing.
The Process of Self-archiving (green OA)

No extra work for researchers, university library is the key player

- External sources
  - Metadata
  - Files

- Author
  - Minimum metadata
  - Files

- CRIS Research database
- Permissions
- Publisher policies

- DSPACE Repository
- Open Linked Data
- Reporting
- Feedback for authors
- Social media

Cost-effectiveness
Productivity
Results of the Project: Development of green open access in Finland

- Number of archived OA articles in 5 Finnish repositories 2010-2016
Results of the Project: Development of green open access in Finland

- During the Project the number of articles in Finnish repositories has tripled.
- But still the share of articles deposited is very low in all Finnish universities – with one exception – the University of Jyväskylä.
- Most of the deposited articles are born open access – copies of publisher pdf:s from open access journals. Only in University of Jyväskylä the share of final drafts is almost equal to publisher pdf:s

The process of self-archiving is not working the way it should – except in Jyväskylä.
The share of deposited articles in university's own repository vs articles published 2015
Publisher pdf:s, final drafts and pre prints in 4 Finnish repositories
Open Access in the University of Jyväskylä

- [http://openaccess.jyu.fi](http://openaccess.jyu.fi)
- University of Jyväskylä is the number 1 open access publisher in Finland – others won’t even come even close!
- Centralized services and processes for practicing OA.
- University Library is the key player and takes care of self-archiving and population of CRIS.
- Repository [JYX](http://jyx.jyu.fi) among the best repositories in EU.
Growth of open access in University of Jyväskylä 2015-2016
Growth of Green open access of peer reviewed articles

Green OA peer rev. articles

- 1/2015
- 4/2015
- 2/2016
- 7/2016
- 10/2016
Best practices for self-archiving

- Support from the administration is essential – strong mandate.
- Centralized services for practicing self-archiving – researchers **do not** have to do it themselves.
- Centralized services for maintaining and populating CRIS – library staff are specialists.
- Take good care of metadata!
- Interoperability of CRIS and repository is very important.
- Constant communication with researchers, faculties and administration.
- Make open access and its benefits visible
